

LEDANO Textures

A kaleidoscope of the most important Ledano textures

When selecting your required texture, please consider the following: the thickness of the material influences the depth of the structure; the level of gloss and color of a texture can change and large surfaces with coarse texture appear more vivid. For desktops we recommend fine grain, fine pores and perhaps fine tumble and of course plain Ledano.

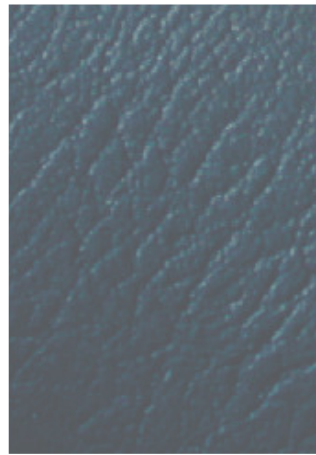

The rolls are 140 cm to 150 cm depending on thickness. Due to technical reasons not all textures can be supplied on rolls. The size of the plate is approx. 100 x 150 cm depending on texture.
